**New MARC 21 Values/Fields: Summary**

**June 2012 TAG TABLE CHANGES FOR VOYAGER WITH UNICODE**

This document summarizes changes to the LC ILS Tag Tables (UnicodeLCMARC21) for implementation in June of 2012.

Although these data elements are now valid in the LC ILS, not all of them will be actively supplied in LC cataloging (they may occur as "pass through" data elements in records done as copy cataloging).   In general, this document summarizes the subset of newly available data elements from two aspects: 1) those to begin actively supplying; 2) those NOT to supply (those not actively supplied should be considered "pass through" data elements, unless otherwise indicated).  The decision to supply or not may be based on the descriptive cataloging code being used.  This summary is relevant to general cataloging-- application of newly available data elements relevant to cataloging done in the special format divisions will be determined by staff in those divisions, as will the guidelines for their application.

**\*\*\*Staff should evaluate any customized templates and/or macros they may have developed to determine if these changes have an impact\*\*\***
