MARC 21 encoding to accommodate RDA elements:

LC practice for November 2011+

NOTE: This document records the recommended LC practice when giving the information in LC records. See the separate document on which RDA elements are core elements for LC; other elements are given according to cataloger's judgment. Changes from LC practice during the US RDA Test are highlighted in yellow.

<u>Bibliographic format</u>: LC will continue to supply ISBD punctuation; LC will not use the bibliographic format when creating records for works and expressions.

		When using subfield \$i, give value "r" in
		subfield \$w/0.

Some dates can be coded easily using ISO 8601 in the appropriate subfield of optional field 046; others need a specialized standard such as the Extended Date/Time Format (EDTF)—here are typical examples of each:

RDA dates in ISO 8601 date scheme (no need to provide a source in \$2)
